

I am a computer scientist in the interdisciplinary areas of computational social science, social computing, and fairness, accountability, transparency, and ethics in AI (FATE). By complementing multimodal datastreams with social media, I adopt methods from machine learning, statistics, natural language, and causal inference analysis to examine wellbeing. A stream of my research focuses on wellbeing in situated contexts, such as college campuses and workplaces. I am interested in questions relating to understanding the in-practice utility and ecological validity of wellbeing sensing technologies, which includes evaluating the harms and benefits of these technologies, and rethinking the ethical design, development, and deployment of wellbeing technologies.

## Experience

- Oct 2021 – **Senior Researcher**, *Microsoft Research*, Montreal.
- Feb 2023 I worked with Fairness, Accountability, Transparency, and Ethics in AI (FATE) group. My projects spanned understanding the harms and challenges of data-driven and passive sensing based wellbeing technologies. I have conducted multiple studies in the space of workplace wellbeing.
- Aug 2016 – **Graduate Research Assistant**, *Georgia Tech*, School of Interactive Computing.
- May 2021 Advised by Dr. Munmun De Choudhury, as a Ph.D. student specializing in social computing. Broadly motivated in topics and methods related to computational social science and human-centered machine learning. In particular, my research interest involves computational and causal approaches of examining wellbeing through social media and complementary multimodal sensing. My research focused on geographically situated communities, such as college campuses and workplaces.
- May 2020 – **Research Intern**, *Snap Research*.
- Aug 2020 Advised by Dr. Maarten Bos, I conducted causal studies on understanding the effect of timing advertisements, and how people's momentary user states are associated with ad consumption on social media. This research is motivated to contribute towards better and privacy-preserving understanding of human behavior and improving content recommendation. This work led to a publication at ACM CHI 2021 [C<sub>16</sub>] and at SCP [W<sub>11</sub>], and two patents.
- May 2019 – **Research Intern**, *Microsoft Research*, India.
- Aug 2019 Advised by Dr. Amit Sharma, I conducted retrospective case-control based causal study in observational setting. In particular, we investigated the question of *what* factors lead to effective psychosocial outcomes in online mental health communities. We quantified individuals' psychosocial outcomes in an online mental health community, and then compared the social support based interventions received by individuals who improved the most (Case) against those who improved the least (Control). This work led to a publication at AAAI ICWSM 2020 [C<sub>9</sub>].
- May 2018 – **Visiting Scholar**, *Max Planck Institute for Software Systems (MPI-SWS)*.
- July 2018 Advised by Dr. Krishna P. Gummadi, I worked on the problem of how social media based advertising platforms enable advertisers to micro-target their audience in a malicious way. We experimentally studied how Facebook ads from the Russian IRA run prior to 2016 U.S. elections exploited Facebook's targeted advertising platform to target ads on divisive or polarizing topics (eg, immigration, race-based policing) at vulnerable sub-populations. This work led to a publication at ACM FAT\* 2019 [C<sub>4</sub>]
- May 2017 – **Research Intern**, *Fred Hutch*, Hutch Data Commonwealth.
- July 2017 Advised by Dr. Naveen Ashish, I worked in the domain of biomedical data sciences and computational social science. I examined high dimensional machine learning using genomics data to predict the risk of Colorectal Cancer. I also worked on quantifying the 'impact' of tweets to analyze the outreach of Cancer Research information and awareness.

- Dec 2012 – **Senior Researcher**, *Abzooba*, X, NLP & Data Sciences R&D.
- Aug 2016 As the product development lead of XPresso, Abzooba's flagship product, I conceptualized techniques, and developed modules to extract information in an end-to-end automated, scalable, and efficient fashion. I worked on problems relating to NLP, machine learning, and predictive analytics, across the domains of finance, retail, and healthcare. I developed the Continuous Learning System (CLS), and led my team to win a Hackathon for Compliance Risk conducted by a U.S. retail giant where we developed the Compliance Risk Index (CRIX). My work was a part of three patents at Abzooba.
- o NLP problems such as aspect-based sentiment analysis, emotion categorization, document classification, semantic search, trending topics detection, ontology building, and so on.
  - o NLP techniques like Semantic Role Labeling, Dependency Parsing, Word-Vectors, Topic Modeling, and Latent Semantic Hashing.
  - o Data Sciences problems like predicting compliance risk, member expenses, distributor costs, etc.
- Sep 2013 – **Visiting Faculty Member**, *Praxis Business School*.
- Jul 2014 Conducted courses on Big Data Analytics and Retail Analytics. Subjects included Hadoop, Map Reduce, Unix and Programming fundamentals, and Natural Language Processing.
- Aug 2012 – **Junior Research Associate**, *Infosys*, Infosys Labs, R&D.
- Nov 2012 Conceptualized & implemented an information extraction tool from unstructured financial reports. Contributed in the ideation of a semantic similarity-based recommendation system of research projects.
- May 2011 – **Research Intern**, *Siemens*, Corporate Technologies R&D.
- July 2011 Set up a Hadoop cluster of 30 computers, and installed Mahout and Katta for running jobs. Developed a tool for accessing Lucene indexes to search and analyze their content based on parameters.
